

In science and philosophy, a paradigm (PARR-ə-dyme) is a distinct set of concepts or thought patterns, including theories, research methods, postulates, and standards for what constitute legitimate contributions to a field. The word paradigm is Greek in origin, meaning "pattern".

## **Paradigm**

Is it a bird or is it a plane  
Just a concept of life so vain  
Hard or soft just systems urbane  
Architect and engineer it's their domain

No wait! no nonsense it's a construct thing  
Wire diagrams and structures put in the bin  
Bang up to date with a concept sublime  
It's a mental concept now vogue it's a Paradigm

With culture and values more moral a principle  
No nuts and bolts so hard and invincible  
Design and construct big and strong  
No it's define and describe be right not wrong

Relationship mapping draw a scatter gram  
No pregnant pause, just get back in your pram  
Take bat and ball home if you will  
Level playing field a team place to fill

Never mind the intellect or skill  
It's all in the heart more emotional will  
Move on and be brave it's the new grand order  
Keep to your side not over our border

It's all well and good  
Just make it understood  
Human in nature gentile mankind  
Tradition stands firm oh such a bind

Change for the better be on board  
Be first with a letter or one untoward  
Keep in line with the pace  
Or fall foul of the rat race

No need to move with the kitchen sink  
No need to clean or make a stink  
Wash up the grime more clear and define  
Enjoy the new, order your own paradigm

*Paradigm*
